

Senior or Principal Embedded Linux Engineer

Konsulko Group is looking for an outstanding engineer with a strong background in embedded Linux.

Here's a great opportunity to work with a world-class embedded Linux team.

Must have experience with embedded systems, the Linux kernel, device drivers, and boot loaders. Experience with bring-up of new hardware including ability to read hardware schematics is a plus.

The position is based in the USA, mainly remote. The West Coast is preferred but will consider candidates in other locations as well. Ability to travel occasionally to customer sites in the US is desirable. US citizenship is also a plus.

Primary Responsibilities:

- New hardware bring-up.
- Port the Linux kernel and port or develop new device drivers.
- Work closely with Konsulko's customers to track and integrate specific Linux/ kernel infrastructure and any third-party drivers in their software stacks.

Job Requirements:

- A Passion for Linux
- B.S. in Computer Science and 10 years related work, or M.S. in Computer Science and 7 years related work experience. Will consider exceptional candidates without a degree but a proven track record in the Linux / OSS community.
- Proficient in C programming.
- Experience with build systems such as Yocto Project or buildroot.
- Expertise with Git.
- Strong analytical and problem-solving skills.

- Excellent English verbal, written, and documentation skills.

Please send your CV or resume in pdf form to careers@konsulko.com.
